Vaccine preventable diseases: 15,316

- Influenza - 10,548
- Meningococcal disease - 14
- Measles - 0
- Pertussis - 21

Other diseases (including zoonotic diseases): 9,673

- RSV - 9,385
- IGAS - 141

Blood-borne viruses: 954

- Hepatitis B - 350
(newly-acquired 6)
- Hepatitis C - 543
(newly-acquired 50)

Key trends

Infectious syphilis is increasing and the syphilis outbreak in metropolitan Perth is ongoing.

- Infectious syphilis notifications continue to increase, including among priority populations such as pregnant women, people experiencing homelessness, and women of childbearing age.
- MCDC continues to respond to the syphilis outbreak in metropolitan Perth using a collaborative and coordinated approach involving multiple stakeholders.

Immunisation was challenged by COVID-19

- Overall, immunisation coverage appears to be trending downward since 2021, likely due to the focus on COVID-19 and the reduced awareness about childhood immunisation.
- Despite these trends, there was a 1.2 percent increase in coverage among Aboriginal children at 12 months of age in 2022.
- Moorditj Start, a MCDC program that provides support to parents of Aboriginal infants to start the immunisation schedule, is being rolled out across Perth in 2023 after a successful pilot in 2022.

New infectious disease threats continue to emerge

- MCDC managed seven cases of mpox, a zoonotic disease endemic to West Africa that spread widely in 2022, with cases confirmed in at least 74 countries.
- WA recorded 1.28 million COVID-19 cases and 828 COVID-19 related deaths in 2022, after borders opened in March 2022 with high vaccination coverage.
