

What is TB?

We are working together to end tuberculosis (TB).

TB is caused by the TB bacteria (germ) that can infect your body, especially your lungs.

TB is spread in the air when someone who is sick with TB coughs, sings, laughs or talks.

If medicine is not taken, TB can spread to others and cause sickness and even death.

You could have active TB if you have any of these symptoms:

Persistent cough

Tiredness

Unexplained weight loss

Fever

Night sweats

Cough up blood

Sleeping (latent) TB infection

TB germ is sleeping – you feel healthy

TB germ wakes up – makes you sick

How can I test for TB?

It's easy. Visit your GP or local clinic and ask your healthcare worker for a check-up for TB.
